Message Alerts Application Provides Powerful Rules and Filters for your BlackBerry Email and SMS Messages!

WebMessenger puts you back in control of your Email and SMS messages on your BlackBerry device. Our Message Alerts application brings to the BlackBerry the kind of functionality provided on the desktop by the Rules Wizard in MS Outlook.

Message Alerts are especially valuable to people that receive many e-mails and SMS messages and want to be able to filter the important ones and be notified when a specific message is received.

Key Features & Benefits

The Message Alert application runs in the background on your BlackBerry and is automatically launched with the OS. You can control the time of day and week when the rules/alerts are active with the settings screen.

Rules

- Can be defined based on the Subject:, From:, To: , CC: fields or the message content.
- Can also be created through the context menus in the Inbox and Address Book applications.
- The "Create Email Alert" menu for an email in the inbox it will launch the Rule definition screen. Selecting "From" on this screen will automatically populate the "From" condition with the address from the current email

Actions performed when a rule is satisfied

- Continuous alert
- Customized audio and vibrate notification
- A pop-up dialog notification
- Forwarding or deleting of the e-mail, marking the e-mail as read.
- Retrieving the entire e-mail (or up to certain number of KB).
- Keep the pop-up alert notification on the screen until a key is pressed - in this way you will not miss an important message that was received and buried down in your inbox folder.
- Back up and storage of the rules via email

Application Licensing

- One time license fee. No monthly charges.
- Consumer and prosumer user licensing available
- Enterprise edition provides management and centralized backup
- Packaging available for carriers
