

WebMessenger Mobile IM Service (WMS) is the only multi-network, multi-carrier mobile IM solution available to professionals and small business.

Obtain all the benefits of always-on presence, availability, real-time IM and data access including devices from:

- BlackBerry
- Palm
- Handspring
- Nokia
- Motorola
- Microsoft
- HP
- Samsung

Key Benefits:
No infrastructure required
Multi-network client
Always-available
Secure private messaging
Value-added application for your PDA or phone

At last, a secure, mobile instant messaging service designed for professionals and small businesses with enterprise features!

Mobile professionals require robust, real-time communications tools to bring efficiency to their daily activities including: arranging and juggling appointments; coordinating a conference call; requesting data for a proposal; checking on project status; resolving a customer issue, authorizing a purchase, providing input to a collaborative process, communicating with staff or superiors; or just keeping in touch with their families.

Instant Messaging (IM) brings new efficiencies to the workplace. Rapid adoption of Instant Messaging in business is changing the way we work and communicate. Current generation wireless phones and PDAs are now powerful enough to deliver robust IM solutions to the mobile user.

Unlike text-messaging available on many wireless phone plans, IM provides many more conveniences including a portable buddy list, addressing by identity, online presence and availability detection, alerts, and the ability to chat in real time rather than time delayed. Meta Group predicts that by 2007 there will be 95 Million IM users in North American business.

IM mobility requires simplicity. Mobile users want a single application that provides access to all their instant messaging needs without complexity or clutter, especially on devices with limited displays. Mobile users want IM on *their* device, using *their* carrier and want to be able to talk with all *their* buddies on whatever network they are associated with. That is why the WebMessenger Mobile Service was created.

WebMessenger Mobile IM Service

WebMessenger Mobile IM Service (WMS) is delivered using the WebMessenger Mobile Platform (WMP) – a carrier-grade client/server software that bridges a variety of wireless networks and mobile devices. This hosted service is available to your device 24x7 from our fully monitored and supported data center.

WMP provides a robust and highly flexible architecture to ensure secure, real time communications. The platform seamlessly provides interoperable messaging between GPRS, CDMA, iDEN, Mobitex, DataTAC and CDPD wireless networks.

The real-time messaging feature supports secure, private IM among WMS identities, public IM on MSN, Yahoo, AOL and ICQ as well as enterprise IM on leading servers including IBM Lotus IM (Sametime), Jabber XCP, Microsoft Live Communication Server and Exchange IM.

The service enables always-available access to data, instant messaging and presence awareness from a broad range of handheld wireless devices. WMP includes proprietary clients for BlackBerry (both J2ME and legacy devices), Palm (including Tungsten and Treo), Pocket PC devices, Motorola pagers, Nokia Communicator, SMS, BREW and J2ME-enabled handsets.

Key Features & Benefits

- WebMessenger client provides multi-network access in a single client simplifying the desktop.
- Depending on the device the IM client runs simultaneous with phone and email applications.
- IM client can transmit and receive extended presence information (online, busy, away, and not available) as well as recognize the device of origin (desktop or mobile user).
- Contacts or Buddy List can be managed (add, drop, edit) can be done from the device in the field or from a desktop.
- Contacts and Buddies can and be organized into personalized groups for easy recognition and access..
- Custom notifications and alerts (audio, vibration) can be set up for new inbound messages.
- Message history can be displayed with timestamps.
- Multiparty chat is supported.
- Conversations among WebMessenger Mobile IM Service identities are encrypted, private and secure.

WebMessenger Success

WebMessenger is the leading provider of a new generation of wireless data delivery products that enable instant messaging and online presence awareness for all devices, communication protocols and service networks. WebMessenger delivers these products as either enterprise software or as a hosted ASP service. Ten thousand mobile IM users rely on WebMessenger Mobile IM Service. For example, Go America selected WebMessenger Mobile IM Services to provide IM to deaf wireless users. Go America and Wynd Communications have been serving the deaf and hearing impaired market since 2002. WebMessenger Wireless Mobile Service is the perfect solution for this community. On the enterprise side of the market, financial services giant, MetLife, is using WebMessenger Mobile Platform in a behind the firewall enterprise implementation, to provide private, secure, mobile IM to their users.
